

FlexMove for Global Government

Connectivity for Mission Success

Intelsat FlexMove for Global Government Brings Broadband Capabilities to Humanitarian and Government Agencies in Motion

Protecting borders and responding to humanitarian crises requires a resilient, high-performance network powerful enough to support two-way voice, real-time video, and secure high-speed data transfer. But traditional connectivity solutions often struggle to keep up with the bandwidth-intensive applications that government agencies and disaster response teams around the world need for mission success in remote and emergency operations.

- Civil Defense**
- Disaster Relief**
- Humanitarian Aid**
- Emergency Response**
- Portable Connectivity**

When crises take you into challenging and hard-to-reach terrain, FlexMove is there. By leveraging the power of Intelsat's global, multi-layered broadband satellite network, FlexMove takes away the complexity of handling network availability, configuration, and management with fully integrated VSAT terminals that allow users to connect in just minutes.

Connectivity When and Where You Need It

With Intelsat's global multi-layered, Ku-band satellite network, organizations can power the necessary applications that lead to mission success, both on the move and on foot.

Always Secure

With an independent SOC 3 cybersecurity accreditation, sensitive communications remain safe from unauthorized access or jamming.

Portable and Powerful

FlexMove utilizes grab-and-go manpack terminals for portable connectivity that can be deployed quickly without prior in-depth technical training.

Comms-on-the-Move

Enroute Connectivity

Next-generation, low-profile antennas enable connected mobility on a variety of vehicles, with simple power-on startup and automated acquisition for easy operation.

Comms-on-the-Pause

Satellite Made Easy

Intelsat FlexMove is the first high-throughput satellite (HTS) solution on the market. Simplify access to broadband communications with a ubiquitous, fully managed, end-to-end land mobility solution.

- Fast and Cost-effective**
Flexible service plans sold by the gigabyte with data rates up to 10 Mbps, at a fraction of the cost. **Service and hardware promotions available.**
- Next-generation Network Design**
Seamless integration with existing terrestrial wireless networks for optimal performance.

Up to **20x**
Faster than legacy L-Band satellite solutions

Enable a New Generation of Connectivity

- Secure communications for telemedicine applications**
- Confidently connect disparate networks, operations, and command centers**
- Advanced situational awareness for hazardous environments**
- Real-time video streaming for mission-critical operations**

Can Your Team Afford to Wait?

Never lose reach, redundancy, or operational visibility with Intelsat FlexMove.
